---

I'm a Designer with 20 years of experience, working in several areas, such as graphic design, front-end, e-commerce, and UX. Throughout my career I worked in a large communication group, starting as an intern and leaving as Head of Design, where I had the opportunity to lead a team of designers and work closely with the company's C-Level in strategic decisions.

After 10 years in this company, I decided to open my own digital agency, where I learned a lot about business and developed myself in all aspects, both as a hands-on professional and as a strategic one, dealing with stakeholders in search of business solutions. My focus is to deliver innovative solutions that are satisfactory for both the user and the business, bringing profit to the company and improving the user experience.

For the last 10 years I specialized myself in User Interface and User Experience, creating digital experiences for startups, small business and big enterprises such as Boticário, Stone Co., Bradesco.

#### WORK EXPERIENCE

### Senior Product Designer

Boticário • Remote • Full-time

Aug 2022 • Present

#### Challenge

Grupo Boticário is the largest franchise network in the world and has a complex ecosystem of companies that work for its operation. Given this scenario, it became necessary to create solutions that would support the group's operation with partner companies.

- Anticipation of Receivables for Suppliers

Solution for anticipating receivables for Grupo Boticário suppliers.

- Dealer Credit Analysis

Integrated credit analysis solution for suppliers.

## My Role

- Led the Discovery processes together with the squad, understanding customer behavior from different sources of information and linking it to KPIs and business indicators, contributing to squad decisions through opportunity trees, testing and iteration planning, and evaluation of the results obtained.
- Identified, synthesized and proposed continuous improvement of the current service blueprint, considering jobs to be done, personas and extreme users, indicators, technology requirements, communication rules and backoffice interactions, applying service design concepts and methods to evolve customer journeys.
- Defined improvements in products and services based on exploratory and validation research with clients, ensuring the quality of the applied method.
- Conceived experience prototypes in low and high fidelity ensuring effectiveness and quality in all its variations of use cases and flows, communicating the design and organizing the implementation requirements to evolve products and their customer journeys.
- Promoted continuous improvements and proposed new components to the established identity and usability guide, taking care of the consistency and quality of the company's design language.
- Developed and proposed processes, following standards, together with the design team.
- I monitored the business results of the product, assessing the impacts on the various cross-company related areas, and ensuring corrections in the mappings by all, ensuring the updating of the customer's journeys.

## Senior Product Designer

Contabilizei • Remote • Full-time

Aug 2022 • Jul 2022

## Challenge

My first challenge within Contabilizei was to conduct, together with a UX Researcher, a survey for the acquisition team, more specifically in the Growth Tribe.

The 02 main customer attraction initiatives used during the growth process were Performance Campaigns (CPC) and SEO (Search Engine Optimization). During the last few months, the main metrics showed a continuous decline, which forced the company to rethink its attraction strategy, as well as to have a better understanding of its public.

## My Role

- Collaborate with UX researchers to leverage qualitative and quantitative data to mature product concepts.
- Collaborated with engineers, product managers, service teams and other designers to ensure projects generated the desired UX, business and technical results.
- I took a leadership role in defining, collecting, and analyzing the data needed to inform problem-solving decisions.
- Identified needs and key opportunities for user input; helped plan and conduct user research with our user research team with contextual interviews, think aloud, A/B testing, surveys and analytics.
- I created new ways to share the results of the surveys in which I was involved with the aim of empowering other teams and democratizing the knowledge acquired in the surveys. [see this item]
- Identify opportunities for improvement and collaboration in data-driven experiments to validate problem hypotheses. [see the case]

## Senior Product Specialist

TAG/Stone Co. • Remote • Full-time

Jan 2021 • Feb 2022

### Challenge

This was one of the most interesting challenges of my career because it is a purely regulatory business, 100% based on API and B2B.

I had the opportunity to set up the company's first design team and structure design processes.

I coordinated the front that structured the first version of the company's design system that would become the main base for building the company's first digital products.

I participated in the process of building the first interface products that aimed to facilitate access to API technology for small players on the market.

I also worked on projects aimed at internal customers such as the operations team to study and optimize this contact points with their customers.

### My Role

- Helped build, manage and maintain the design system.
- Created a specific documentation model for the design team that facilitated the understanding of the endpoints of the API on which the product was based. After a while the same documentation served for other teams. [\[view item\]](#)
- Worked with engineers and product managers to oversee the implementation of user interface design, while serving as a design advocate in strategic product decisions.
- Mentored other designers and helped foster a collaborative work environment.
- Develop relationships with customers and prospects, learning from them about their goals and problems, and appropriately incorporating their input into your design process.
- Manage design projects from start to finish, working with the PM to understand what users need to accomplish and then researching, designing, and validating the best way for them to do that.
- Worked to create bridges between disciplines such as Design, Product, Engineering and Marketing.

## UX/UI Designer

Sapient/AG2. • Remote • Contract

Aug 2020 • Dec 2020

I joined this project through Deeploy, which is a consultancy that connects designers to projects from large companies.

I worked specifically as a UX Designer in the investment product of the bank Bradesco. During the project, I developed journeys for this product together with my responsible squad.

## **Founder - UX/UI Designer / Frontend-Backend Dev**

92dpi Digital Agency. • Remote • Full-time

Jan 2012 • Jul 2020

As an entrepreneurial experience, I created the first digital agency in the north of the country at a time when little was said about this business format, which was dominated by large traditional agencies strongly linked to offline.

Through my strong foundation in digital tools and processes, I created a market strategy to win customers and gain space.

Over time I had the opportunity to work in the most diverse niches and get to know the different nuances of the market.

Developed projects for corporate websites, portals, blogs, virtual stores, performance campaigns, digital intelligence strategies, campaigns and visual identity systems. As an agency, my work was very diversified.

To handle the work demands, I set up a remote team that made use of existing technologies to scale processes and deliveries to customers.

## **UX/UI Designer / Frontend-Backend Dev**

Calderaro Communication Network. • On-site • Full-time

Jan 2001 • Dec 2011

Calderaro Communication Network

I started my career as an intern and reached the position of art director leading a team of 5 designers.

As an intern, I created the first version of the group's newspaper portal and over the years I became the main person responsible for its evolution.

I worked heavily in the creation of campaigns for products idealized by the group's marketing, from visual identity, commercial proposals, advertising campaigns, media strategy, among others. The visual design of the projects in many cases permeated different vehicles of the group such as printed newspapers, TV, web and radio.

I carried out projects aimed at systematizing the communication process of the group's visual identity systems, which included the logo, uniforms, stationery, brochures, vehicle fleet, among others.
